Recycling EV Batteries for Home Storage

Dear Dianne Danti:

REOCA member John Zondlo discovered a company called High Desert Off Grid that takes old EV batteries and repurposes them for home storage. He has organized a virtual Zoom meeting with their founder to discuss their solution to home battery storage.

We know the significant green tech benefits of EVs. But there is a dark side. What happens to their big battery packs when they are discarded? Lithium Ion has a long Half life. We don't want them in landfills.

Please join us for the next REOCA meeting on May 25th to learn about one innovative approach: recycling EV batteries for home storage.

High Desert Off Grid

Recycling EV Batteries For Home Storage

May 25, 2021 at 6pm

Our guest speaker will be Ryan Pohl, who founded High Desert Off Grid. He repurposes discarded EV batteries for home storage. Most of his projects are for off-grid enthusiasts.

Ryan is a Mechanical Engineer insured and certified in solar off grid installation and design. He started his career at Daimler Trucks, diagnosing and designing electrical systems for class 8 semi trucks. He began living off grid in a small RV in 2016 and has been creating off grid systems ever since. He has designed and installed over 60 lithium off grid systems.

You can read about Ryan and see some of his projects at <https://www.highdesertoffgrid.com>
